

Safety Management

We'll make sure your project reaches its destination safely.

Services & Expertise

We handle safety management for railway projects and guide our clients safely through demanding safety and certification processes.

- Comprehensive safety management throughout the entire project lifecycle
- Implementation and management of safety, approval, and certification processes
- Preparation of process documents, specifications, and supporting documentation
- Development and coordination of solutions for special cases, deviations from regulations, and project-specific requirements

Methodology & Approach

Our experts combine in-depth knowledge of standards with many years of project experience.

- Decades of experience in the application of EN 50126 and the CSM Regulation
- Structured management of complex coordination efforts between clients, designers, manufacturers, assessors, and inspectors
- Development of technical safety concepts and support with requirements documents and specifications
- Ensuring transparent, traceable, and compliant processes throughout all project phases

Impact & Integration

Incorporating safety management early on reduces risks, provides planning certainty and supports the smooth progress of the project.

- Ongoing support for all project participants from designing through commissioning
- Early identification and minimization of safety-related risks
- Timely provision of complete safety and approval documentation
- Proven experience from numerous successfully implemented rail and infrastructure projects
